Terminal Disclaimer

The terminal disclaimer filed on March 10, 2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent 7, 070,928; US Patent 7,223,545 and US Patent application 10/643752 has been reviewed and is accepted. The terminal disclaimer has been recorded.

The rejections of claims under obviousness-type double patenting are withdrawn in view of the terminal disclaimer filed by Applicant discussed above.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The claims of the instant invention are drawn to an in vitro method for increasing reaction selectivity among a plurality of reactants in a nucleic acid templated synthesis reaction, a method which yields a reaction product that is not a nucleic acid. The closest prior art, Sergeev (WO00/61775; October 2000) teaches a method of nucleic acid templated synthesis that produces a reaction product that is not nucleic acid. However, while Sergeev teaches a method that is very similar in design and function to the method as claimed, Sergeev does not teach or suggest that the second and third reactive units are capable of reacting independently with the first reactive unit. Furthermore, in the various embodiments claimed, the third reactive unit has an oligonucleotide attached, but the attached oligonucleotide does not comprise an anti-codon sequence and so does not anneal to the template and is therefore able to independently react with either the first reactive unit or with the second reactive unit.

The format of Sergeev, which teaches oligonucleotides with associated reactive units that hybridize sequentially or in adjacent locations along a template to mediate template directed
